

# Software that boosts terminal server performance and capacity

## Server Enhancement

## Client Management

TERMINAL SERVER PERFORMANCE ENHANCEMENT SOFTWARE

Key Features	Key Benefits
More users per server – typically 30% or more	Deploying Wyse Expedian on three servers is like getting a fourth server for a fraction of the cost, without all the work and headaches of deploying the extra server
Better performance	Improved user experience with 30% or greater increase of application transaction and end-user GUI responsiveness
Improved ease-of-use with new Performance Management Console (optional)	Larger server farms will benefit from the new Performance Management Console which makes deployment and management for Wyse Expedian even faster and easier
Improved reporting	The enhanced optimization summary reporting provides convenient, easy access to reporting on all optimizations through the Microsoft Management Console

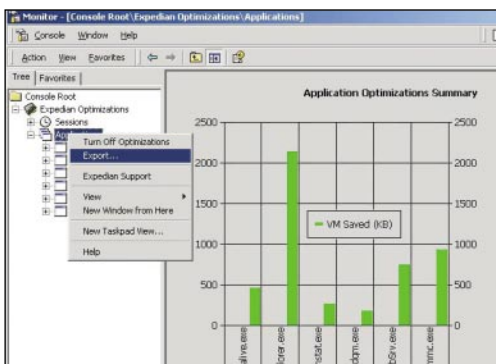

Wyse Expedian™, version 2.0, is simple, yet powerful, server software that increases performance and capacity on terminal servers. It is a cost-effective way to increase the number of users on a server, reduce the number of servers to manage, and boost existing application performance by at least 30% or more.

Wyse Expedian software optimizes memory use by reducing unnecessary swapping to virtual memory and unnecessary hard disk activity – allowing the Terminal Server to support more concurrent users, or improve application performance, or both.

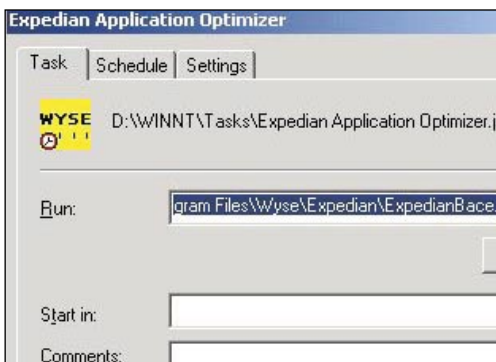

You can install Wyse Expedian software on production servers, safely, quickly, and without a reboot, and it immediately begins analyzing the server and its processes. The software includes an analysis service, an applications optimization process, and a Microsoft Management Console snap-in. Large server farms can benefit from the new Performance Management Console (optional) which makes deployment and management fast and easy.

When new applications or new versions of existing applications are loaded on a server, Wyse Expedian software automatically detects them and performs any necessary system adjustments during the next scheduled optimization session – which can be run at any time, with no direct administration required.

With its powerful performance and capacity improvements, easy scheduling capabilities, and user-friendly reporting, Wyse Expedian software is ideal for busy IT staffs in a server-centric environment.

**Optimizations Summary** Wyse Expedian provides convenient, easy access to reporting on all optimizations through the Microsoft Management Console.

**Tasks Screen** Conveniently schedule application optimizations to run at off-peak times such as late at night, with no direct administration necessary.

**Specifications**

**System Requirements**

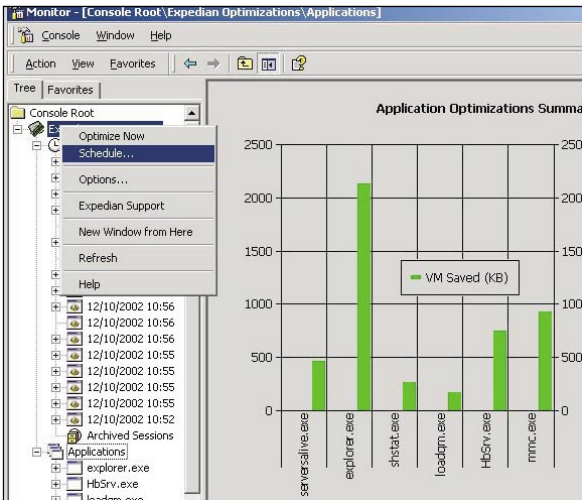

- Microsoft Windows NT Terminal Server Edition or Windows 2000/2003 operating system
- Microsoft Management Console
- Windows 32-bit applications and applications components (Wyse Expedian™ does not optimize 16-bit applications)

**Customer Support**

- Per-seat licensing with free technical phone support for 90 days
- One- and two-year telephone support with Wyse Expedian™ Priority Plus Support
- One-, two-, and three-year software upgrades with Wyse Expedian Priority Plus Maintenance
- For information or support, call 800 800 WYSE (9973) or visit the Wyse website at [www.wyse.com](http://www.wyse.com).

**Sessions Summary** The Sessions view contains a list of all optimizations that have been completed to date, allowing administrators to gauge how much Virtual Memory is saved per user session.

**Application Summary** The Applications view lists all of the optimizations that have been completed by application, allowing administrators to see how much Virtual Memory is saved per application session.
